

To the Homeowner or Current Resident:

In the next couple of weeks, Morello Construction will be coming on to your property to start the process of connecting your house to the sewer system that is being installed in Crescent. The construction crew will be working during business hours and will make every effort to cause as little damage or disruption as possible to your property. Any pavement or fencing that might need to be removed or is damaged will be replaced before the project is finished in the summer. Someone will also knock on your door a day or two before we start working on your property to give you a heads up.

During this work, your house WILL NOT be connected to the sewer system as the sewer system is not yet operational. You will still be hooked up to your private septic system. However, starting the connection process now will make connecting your house to the system, when the system is operational, a much quicker and simpler process.

If you have any questions or concerns about the placement of the connection lines please feel free to **call Nicole**, from Anderson Engineering – the engineers designing the system, at **(917) 714-3149**.

Thank you so much for your cooperation in this process.

Cheers,

Nicole Braudy - On site Engineer with Anderson Engineering
